The SCS 9001™ Supply Chain Security Management System Creates Exciting Opportunities for Certification Bodies and Auditors

Join us for an informational webinar on Jun 6th to learn more

Business Growth Opportunity for Certification Bodies

The ANSI National Accreditation Board (ANAB) is finalizing an accreditation program based on ISO/IEC 17021-1 for accreditation of organizations to perform audits of TIA QuEST Forum's SCS 9001™ Cyber and Supply Chain Security Management System. SCS 9001 specifies requirements for an effective system to secure supply chains within the Information and Communications Technology (ICT) industry.

Additional details about the standard and the information session are provided below.

Cybercrime is Expanding with Technology and Global Unrest

As the threat of cyberattacks continues to loom over all industries, organizations worldwide are diligently working to fortify their security defenses. The emergence of new technologies like Cloud-computing, IoT, 5G/6G and ORAN and AI/ML presents new cybersecurity challenges for organizations around the world to address. Safeguarding enterprise infrastructure is already a complex task, as highlighted by a 2023 IBM report stating that it takes an average of 207 days to detect a data breach and results in an average cost of more than $4 million.

While many governments are implementing policies and guidelines to bolster the security of communication networks, critical infrastructure, and consumer devices, it is evident that malicious actors will persist in targeting organizations despite regulatory measures. Addressing supply chain vulnerabilities remains an ongoing and critical task, requiring vigilant monitoring of potential untrustworthy vendors to mitigate risks effectively.

Securing the global supply chain is vital

SCS 9001™ is the first-ever global Cyber and Supply Chain Security Management System. SCS 9001 has been developed to provide assurance that network operators and their suppliers have implemented stringent security practices extending across the complete product and service lifecycle. The standard is used to provide confidence that suppliers can be 'trusted' and that their practices align with increasingly demanding government policy. As SCS 9001 is network and technology agnostic, it has a large addressable market across many verticals and use cases.

Join us on June 6th to learn more about this opportunity.

Who Should Attend:

- Certification Bodies
- Scheme Owners
- Auditors

Information Session Agenda:

The session is planned for one hour and will cover the following topics:

1. Introduction to ANAB and TIA QuEST Forum
2. Industry trends driving the need for SCS 9001 including government programs
3. Introduction to the SCS 9001 Supply Chain Security Management System
4. Target verticals, applications and use cases
5. Differentiation: a comparison to select security standards and publications
6. Why you should care - the business opportunity for CBs & Auditors
7. Special offers from ANAB & TIA
8. Questions & Answers

Webinar Registration:

Two sessions are planned to address the needs of attendees in different time zones. Please register via the links below to the time most convenient to you. Once registered, you will receive an e-mail confirmation with a link to join the session.

Webinar #1 (U.S., LATAM, EU, India) Date: June 6, 2024, Time: 11:00 AM EDT	**Webinar #2 (APAC, U.S.)** Date: June 6, 2024, Time: 7:00 PM EDT
